

AFFIDAVIT

REINSPECTION CHARGE

If the construction (or mobile home), well, water lines, and piping from plumbing stubout to septic tank and other pertinent features are in place at the time of the Septic Tank Construction Inspection, they can be verified at that time and the Final Approval can be issued. If one or all of these features are not on site at the time of the Septic Tank Construction Inspection, a re-inspection to insure compliance will have to be performed once these features are placed on the property. Failure to have all of the above in place at the time of the Septic Tank Construction Inspection will delay the issuance of the Final Approval and cause a **delay** in the process by which **electrical service** is approved. **If all features are not on site and a re-inspection is required, you will be charged a \$50.00 re-inspection fee as required by 64E-6.030, Florida Administrative Code.** *Please note that the Septic System contractor may call for the construction final without your knowledge. Please coordinate with the septic tank contractor to avoid the re-inspection fee.*

My signature below is evidence that I have read and understand this requirement.

Signed _____ **Date** _____

In addition to the application, site plan, and affidavit, we will also need the following documents:

- **A floor plan of the structure showing the outside dimensions for each dwelling unit or building that will be connected to the septic tank system. The outside dimensions are required to verify the square footage is the same as what is listed on the application.**
- **A legal description of the parcel of land the septic system is to be installed. This description must show the dimensions of the property (the property deed or a survey usually includes this description).**
