## Acknowledgements

This Community Health Improvement Project was the result of much hard work on the part of the Healthy Holmes Task Force. We would like to acknowledge the very fine work of those involved. We also would like to recognize the specific efforts of Holly Holt, Holmes CHD, for her leadership and vision; Fran Amerson, Holmes CHD, for her workshop coordination; Moises Vallejos, Holmes CHD, for the pictures used in this report; and Brenda Blitch, Doctors Memorial Hospital, for providing the workshop space and coordination of the excellent catering.

## Executive Summary

Holmes County Health Department received a mini-grant from the Florida Department of Health to create a Community Health Improvement Plan. The Holmes Community Health Improvement Plan can be used to guide action and monitor and measure progress toward achievement of goals and objectives to improve the overall quality of life of the community.

Members of the Healthy Holmes Task Force met in two six-hour facilitated workshops to identify community health issues. The workshop team reviewed data from the Holmes County Community Health Needs Assessment, Holmes County Health Status Profile, the Florida County Health Rankings: Mobilizing Action Toward Community Health 2011, Florida CHARTS, the U.S. Census Bureau, and the 2005-2009 American Community Survey. The team developed a list of community themes and strengths, conducted a "forces of change" assessment, wrote strategic priorities with goal statements, and created three specific action plans focused on addressing Chronic Disease, Social Economic Factors, and Maternal/Childl Health within Holmes County, Florida.

## Priority Issue: Chronic Disease Goal (Aim): $\quad$ Reduce obesity rates in Holmes County.

Objective \#1: By June 30, 2012, at least $50 \%$ of K-6 student population will receive education on nutrition and/or physical activity.

Objective \#2: By August 30, 2012, 5\% of population will have been educated on healthy choices.

Objective \#3: By August 30, 2012, 5\% of Holmes County population will have at least five (5) opportunities to participate in a physical activity event.

| Priority Issue: | Social Economic Health |
| :--- | :--- |
| Goal (Aim): | Improve social economic health (SEH) of Holmes County |

Objective \#1: By August 2012, increase usage of resources available in Holmes County by 5\%.

## Priority Issue: Maternal/Child Health <br> Goal (Aim): <br> Improve holistic health of children in Holmes County.

Objective \#1: By August 30, 2013, increase utilization of local Maternal/Child Health (MCH) services by 5\% in Holmes County.

Objective \#2: By June 30, 2013, decrease teen pregnancy rates by 2\% in Holmes County.

The Holmes County Community Health Improvement Action Plans can be used to address and implement activities that target local public health priorities. The implementation and evaluation of each of the Action Plans should involve community members in making decisions and taking action. The Healthy Holmes Task Force focused on community engagement as it identified the activities and programs for each Action Plan, and focused on the strengths, needs and resources of the Holmes County community.

Quad R was contracted by the Holmes County Health Department to provide consultation expertise and develop a report related to 1) community themes and strengths, 2) forces of change assessment, 3) report/documentation of community-identified strategic priorities with goal statements and strategies, and 4) community health improvement plan.

Components of the 2011 Holmes County Community Health Improvement Plan project included two (2) facilitated workshop sessions and a Community Health Improvement Plan to meet the Florida Department of Health mini-grant requirements. The project timeline was from July 1, 2011 through September 9, 2011.

The Public Health Accreditation Board defines a Community Health Improvement Plan (CHIP) as "a longterm, systematic effort to address health problem on the basis of the results of assessment activities and the community health improvement process." A CHIP can be used by health departments, as well as other governmental, education, or human service agencies to coordinate efforts and target resources that promote health.

A CHIP serves to address issues, roles, and common goals and objectives throughout the community. The plan can be used to guide action and monitor and measure progress toward achievement of goals and objectives. The plan, along with a community health needs assessment, can be utilized as justification for support of certain public health initiatives, as part of funding proposals, as well as attracting other resources toward building programs that improve the overall quality of life of the
 community.

## Community Health Profile

Holmes County is in the Florida Panhandle and bordered by the state of Alabama to the north. The county's area is approximately 488.7 square miles, with 482.5 square miles of rural land and 6.3 miles of water. There are five municipalities in Holmes County, with the City of Bonifay being the county seat.

The U.S. Census data show that the population of Holmes County was 19,170 in 2008, and indicate an increased trend to 21,404 by 2020. Holmes County ranks number 55 of the 67 counties in Florida for population.

The Holmes County Health Department provides services and programs to the community in the areas of: Primary Care, Family Planning, Immunizations, STDs, TB, Prescription Assistance Program, Dental, School Health, Healthy Start, Tobacco Education, Chronic Disease, WIC and Environmental Health.

The National Public Health Performance Standards Program (NPHPSP) was conducted in the summer of 2011. The 2011 NPHPSP report indicated the Holmes County Health Department's programs and services contributed to the provision of the 10 Essential Public Health Services, with an overall score of $66 \%$. This report was not available for review during the Community Health Improvement Project.

According to the 2011 Holmes County Community Needs Assessment conducted by the Big Bend Area Health Education Center, Inc., about 30\% of the county residents are male and $65 \%$ are female. The age range of the residents of Holmes County is $18-93$ years, with the median age being 44.98 years.

| Age Distribution | Racial Distribution |
| :---: | :---: |
| - $22 \%$ are under the age of 18 <br> - $61 \%$ are $18-64$ years <br> - $17 \%$ are age 65 or older | - White 81\% |
| Marital Status |  |
| - $54 \%$ are married <br> - $17 \%$ are divorced <br> - $3.8 \%$ are separated <br> - $10.4 \%$ have never married <br> - $2.8 \%$ are unmarried couples <br> - $5.9 \%$ reported being widowed | - Native American 1.4\% <br> - White Hispanic 1.4\% <br> - Black Hispanic 0.3\% <br> - Multi-racial 1.7\% |

More than $69 \%$ of the county population reported having a high school diploma or less. There are seven (7) public schools and one (1) private school in the Holmes Countr School District. More than $57 \%$ of county residents earn less than $\$ 30,000$ annually. The average weekly wage earned in Holmes County, as reported by the Bureau of Labor Statistics in 2010, was $\$ 490$. The poverty rate in the county is $18 \%$, and it is estimated that $26 \%$ of children live in poverty.

Nearly $51 \%$ of county residents surveyed reported that they were employed full-time, while more than $29 \%$ reported being not employed. Reasons for non-employment included: disabled, cannot find work, retired, taking care of family, need training, and other. It was determined that $42 \%$ of Holmes County residents comprise the workforce, and almost half of the residents are working or actively looking for work.

According to needs assessment data, $47.1 \%$ of the residents have health insurance coverage.

| Health Insurance | Housing |
| :---: | :---: |
| - 19.7\% Medicaid <br> - $15.6 \%$ Medicare <br> - $0.3 \%$ Active Military <br> - $2.8 \%$ Champus <br> - $4.5 \%$ Kidcare <br> - $1.0 \%$ Veteran <br> - $20.1 \%$ Out of pocket <br> - 19.4\% No insurance | - $56.1 \%$ own their homes <br> - $21.5 \%$ rent their housing <br> - $9.7 \%$ live with someone else <br> - $7.6 \%$ have other housing arrangements <br> - $66.4 \%$ satisfied with their housing <br> - $17.9 \%$ households are married couples with children <br> - $7.9 \%$ households are single parents with children <br> - $24.7 \%$ consist of a resident living alone |

Five of the top 15 leading causes of death were found to be prevalent among the residents of Holmes County. Over 42\% of residents yielded a BMI rate considered as obese; 26\% considered as overweight; $23.2 \%$ considered normal weight; and $1.7 \%$ considered as underweight.

| Chronic Diseases | Top Health Problems |
| :--- | :--- |
| - Hypertension 51.2\% |  |
| - Overweight/Obesity 30.1\% | • Alcohol \& Other Drug Abuse 31.5\% |
| - Diabetes 27.7\% | - Child Abuse/Neglect 37.3\% |
| - Arthritis 24.2\% | - Poor Diet/Inactivity 26.3\% |
| - Heart Disease 15.6\% | - Teenage Pregnancy 24.2\% |
| - Lung Disease 12.2\% | - Tobacco Use 18\% |
| - Cancers 11.1\% |  |

In Holmes County, 66\% of residents surveyed for the 2011 Holmes County Community Health Needs Assessment reported that they have visited a doctor within the past year. Forty-seven percent reported visiting a dentist, $43.3 \%$ reported having an eye exam, and $38.4 \%$ reported having a teeth cleaning. While almost $60 \%$ reported feeling depressed "sometimes or always," $10 \%$ reported obtaining mental health services in the past year.

Health Services Obtained Outside the County

- $47.4 \%$ lab work
- $36.7 \%$ emergency care
- $34.9 \%$ general practitioner care
- 33.9\% eyecare
- $30.8 \%$ dental care
- $23.3 \%$ radiology
- $18.7 \%$ OB/GYN care
- $17.6 \%$ inpatient care

## Top Health Problems

- Alcohol \& Other Drug Abuse 31.5\%
- Child Abuse/Neglect 37.3\%
- Poor Diet/Inactivity $26.3 \%$
- Teenage Pregnancy 24.2\%
- Tobacco Use 18\%

About 14.5\% reported the need for long-term care services and of those, $67.7 \%$ obtained services within Holmes County. Of the residents who received social service benefits, the majority (40.5\%) obtained benefits from within the county.

The 2011 Holmes County Community Health Needs Assessment also reported data related to personal and community health status. The primary factors identified as important for a healthy community included: good jobs and healthy economy, access to healthcare and services, and religious/spiritual values.

## Personal \& Community Health Status

- $61.6 \%$ reported their health status as "Healthy to Very Healthy"
- $37.7 \%$ reported their health status as "Somewhat Unhealthy to Very Unhealthy"
- $34.6 \%$ reported their community as "Healthy to Very Healthy"
- $56 \%$ reported their community as "Somewhat Unhealthy to Very Unhealthy"

Related to personal health status, the needs assessment surveyed residents on types and length of personal health limitations experienced. About 23.2\% reported having more than 12 days when physical health was "not good" and 17\% reported having more than 11 days when mental health was "not good."

The county was rated as "safe to very safe" by $88.7 \%$ of residents surveyed.

| Community Safety Problems | Places for Recreation |
| :--- | :--- |
| • Manufacturing \& |  |
| use of amphetamines 59.9\% | • Church 53\% |
| • Alcohol use 59.5\% | • Parks 47.8\% |
| • Unsafe sex 24.9\% | • River/lake/beaches/woods 45.3\% |
| • Child abuse 22.5\% |  |
| - Unsafe roads 20.8\% |  |

Twenty-seven percent (27\%) indicated a desire for recreation places, including: centers for fitness and sports, outdoor programs, and activities that foster family and community engagement.

| Preventive Health | Preventive Lifestyle |
| :---: | :---: |
| - $29.8 \%$ influenza immunization <br> - $19 \%$ pneumonia immunization | - $57.8 \%$ participate in physical activity <br> - $69.8 \%$ "always" wear a seatbelt <br> - $30.4 \%$ "always" practice safe sex <br> - $22.8 \%$ "always" perform self-breast exams |

Reported preventive screenings included diabetes and vision screenings for those age 40 and older; prostate digital exam and prostate-specific antigen for males age 40 and older; mammogram and bone density test for females age 40 and older; and colon-rectal screening for those age 50 and older.

| Healthcare Services Needed | Healthcare Practitioners Needed |
| :---: | :---: |
| - 83.7\% Walk-in clinics <br> - 53.3\% Wellness center <br> - 42.2\% Dental services <br> - 39.1\% Health Department services <br> - 34.5\% Nursing home | - 54.3\% Women's health <br> - $46.4 \%$ cancer care <br> - $43.6 \%$ Family practice <br> - $41.8 \%$ Cardiac <br> - $39.8 \%$ Pediatric <br> - $38.8 \%$ Eldercare <br> - 38.4\% Dental |

The 2011 Holmes County Community Health Needs Assessment report proposed recommendations to increase community intervention and engagement to address the high rates of hypertension, overweight/obesity, and diabetes; to promote healthcare access, healthy lifestyles, and preventive health; and to expand in-county programs, providers, and access to care. A key recommendation was to utilize family and faith-based organizations to foster efforts and improve reach. In addition, the report recommended that Holmes County Health Department look for ways to bring health care services closer to more rural residents. It was also recommended that the Healthy Holmes Task force develop community health education campaigns to target healthy weight, healthy lifestyles, and improved community safety.

## Workgroup Process

Two six-hour workshops were held in Holmes County at Doctors Memorial Hospital in Bonifay, FL. Twenty participants attended both workshops and included representation from Holmes County Health Department, Doctors Memorial Hospital, Holmes County Sheriff's Office, Department of Children \& Families, UF-IFAS, Life Management Center, Early Learning Coalition, and Holmes County Emergency Medical Services.

Prior to the first workshop, participants were sent a "brainstorming" worksheet (see Appendix A) to complete and bring to the workshop. The worksheet consisted of questions related to Holmes County as a healthy place to live, needed changes to make Holmes County a healthier place to live, feelings of pride and concern about Holmes County, important issues to help make Holmes Country as healthy as possible, suggestions for improving Holmes County, issues that affect the health of the Holmes County community, and specific threats or opportunities generated by those issues.

The first workshop was held July 15, 2011. Participants were assigned to workgroups to review the 2011 Holmes County Community Health Needs Assessment (see Appendix I) and their individual worksheet information. They also reviewed data and health indicators from:

- County Health Rankings: Mobilizing Action Toward Community Health 2011 Florida;
- Cubit Planning;
- Florida CHARTS; and
- U.S. Census Bureau, 2005-2009 American Community Survey.

Using this information, each workgroup developed a list of critical health issues and/or needs that are currently impacting the Holmes County community. These health issues and/or needs were written into topic statements which identified the issue and trend. The workgroups then identified a list of community partners who could "help" or "hinder" each health issue and/or need; a Strengths, Weaknesses, Opportunities, and Threats was developed and reviewed by all workgroups. Each workgroup then prioritized the health issues and/or needs. The workshop outcomes are provided in Appendix C.

The second workshop was held August 5, 2011. After reviewing the work from the July $15^{\text {th }}$ session, participants identified three (3) priority issues: Social Economic Health, Chronic

Disease, and Child/Maternal Health. Participants then self-selected into one of three the priority issues. Each workgroup was provided the 2011 Holmes County Community Health Needs Assessment and the data and health indicators from the July $15^{\text {th }}$ session for review relevant to their priority issue. The workshop outcomes are provided in Appendix E.

Based on this review each priority issue workgroup listed potential evaluation measures to include in an action plan. The workgroups developed draft action plans for their priority issue, identifying the goal, SMART objectives, strategies, and activities for each. The action plans are included in Appendix J.

In addition, the participants worked together to outline the details of the action plans, including lead roles, community resources, and target date(s) for completion. The workgroups reviewed all the information contained in each priority issue action plan and provided feedback which was incorporated into the final action plan.

## Community Health Action Plan

A community health assessment (CHA) is considered both a process and a product. As a process, the CHA serves to gather and interpret information from multiple and diverse sources in order to develop a deep understanding of the health of a community. This information is then used to develop the "product" or the community health improvement plan. The key link between the CHA and the community health improvement plan is a prioritized list of community health issues that have been identified in the community health profile, local health data, and input from community stakeholders. The final community health improvement plan should be an action-oriented and include priorities, strategies, activities, community resources, timeline, and outcome measures.

The Holmes County Health Task Force used the 2011 Holmes County Community Health Needs Assessment and related documents to identify a long list of public health needs, issues, and problems. The workshop participants fostered a community-oriented perspective on public health and incorporated Holmes County formal and informal networks and support systems, norms and cultural nuances, institutions, and political and economic systems.

Upon completion of the Holmes County workshops, participants identified three (3) priority issues on which to focus: Chronic Disease, Social Economic Factors, and Maternal/Child Health. For each priority issue, the workgroup participants identified specific areas that could be addressed or "helped" by improvement activities, and those areas that were possible barriers or "hinders" to improvement.

Common themes that arose related to addressing issues, included:
o Increase public awareness of available resources
o Mentoring
o Educate early/collaborate with schools
o Community involvement

Common themes related to barriers and/or challenges to improvement, included:
o Lack of transportation
o Budget cuts/lack of funding opportunities
o Poor parental influence
o Lack of employment/poor economy

The groups developed a draft action plan for each priority issue. Action plans are detailed work plans that guide the implementation of a Community Health Improvement Plan.

## Action plans:

- Provide a framework for planning the work needed to achieve the objectives;
- Provide justification as to why funds are needed and how they will be used, imparting credibility to the organization or agency;
- Provide a guide for accomplishing the work within the giving time period; and
- Communicate specific action-oriented approaches and measures for impact which can be shared with all interested parties.

The Holmes County Community Health Improvement action plans include the identification of a priority issue, the goal (or aim) for the priority, the objective for achieving the goal, strategies related to the objective, and activities for each strategy. In addition, the action plans outline the lead role and existing community resources available for each activity, target date(s) for completion, and proposed evaluation measures.

## Priority Issue: Chronic Disease

Five of the top 15 leading causes of death were found to be prevalent among Holmes County residents: hypertension, diabetes, heart disease, lung disease, and cancers. High rates of other diseases were also reported, including overweight/obesity and arthritis. Considering this data, the workgroup identified Chronic Disease as one of the priority issues for the Holmes County Health Improvement Plan.

The areas identified which could address improvement related to Chronic Disease included: education to improve negative behaviors in the home and external environment; targeting schools by incorporating a health-focus into curriculum; developing mentoring programs; educating the public regarding health issues; identifying low price health food menus; and increasing media activity to advertise educational opportunities.

The workgroup identified barriers and/or challenges that they felt would inhibit progress toward community health improvement. These barriers/challenges included: budget cuts that fund programs; lack of motivation; lack of education; peer pressure; economic issues; lack of transportation; poor parental example; low literacy levels; lack of computers/access; and lack of resources to provide education and expertise.

The workgroup identified the goal of Reduce obesity rates in Holmes County as one way to impact Chronic Disease. An action plan was developed for this goal.

| Priority Issue: | Chronic Disease |
| :--- | :--- |
| Goal (Aim): | Reduce obesity rates in Holmes County. |

Objective \#1: By June 30, 2012, at least $50 \%$ of K-6 student population will receive education on nutrition and/or physical activity.

Objective \#2: By August 30, 2012, 5\% of population will have been educated on healthy choices.

Objective \#3: By August 30, 2012, 5\% of Holmes County population will have at least five (5) opportunities to participate in a physical activity event.

| Priority Issue | Chronic Disease |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Priority Issue: Social Economic Factors

More than two-thirds (69\%) of the county population reported having a high school diploma or less, and more than half (57\%) of county residents earn less than $\$ 30,000$ annually. The average weekly wage earned in Holmes County, as reported by the Bureau of Labor Statistics in 2010, was $\$ 490$. The poverty rate in the county is $18 \%$, and it is estimated that $26 \%$ of children live in poverty. Nearly $51 \%$ of county residents surveyed reported that they were employed full-time, while more than $29 \%$ reported being not employed.

The areas identified which could address improvement related to Social Economic Factors included: educating teen girls and teen boys about pregnancy; promoting family planning; conducting financial planning workshops; providing food, clothing and childcare through faithbased organizations and extension services; providing an Higher Education-advising Representative (College, Community College, Technical School) on-site at High School, encouraging dual enrollment in high school, educating about financial aid and scholarship opportunities; providing workforce development; networking to organize volunteers; educating the public about unhealthy lifestyles; and increasing public awareness of existing resources.

The workgroup identified barriers and/or challenges that they felt would inhibit progress toward Social Economic improvement. These barriers/challenges included: lack of collaboration with schools; changing resources and budget cuts; peer pressure, pride, and parental denial; lack of resources; lack of transportation; confidentiality issues; reliance on current system; increased jobless rate; lack of motivation; regulations; grant competitiveness; limited number of qualified/trained employees; proximity to higher education facilities; and rural community.

The workgroup identified the goal of Improve social economic health (SEH) of Holmes County as one way to impact this issue. An action plan was developed for this goal.

| Priority Issue: | Social Economic Health |
| :--- | :--- |
| Goal (Aim): | Improve social economic health (SEH) of Holmes County. |

Objective \#1: By August 2012, increase usage of resources available in Holmes County by 5\%.

| Priority Issue | Social Economic Health |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Goal (Aim) | Improve social economic health (SEH) of Holmes County |  |  |  |  |  |
| Objective \#1 | By August 2012, increase usage of resources available in Holmes County by 5\%. |  |  |  |  |  |
| Strategy \#1 | Create master plan to involve agencies. |  |  |  |  |  |

## Priority Issue: Maternal/Child Health

Holmes County was rated as "safe to very safe" by nearly all (88.7\%) of residents surveyed in the Holmes County Community Needs Assessment. Issues cited as safety problems included: manufacturing and use of amphetamines (59.9\%), alcohol use (59.5\%), unsafe sex (24.9\%), child abuse ( $22.5 \%$ ), and unsafe roads ( $20.8 \%$ ). Rates of immunization among the residents of Holmes County within the past year include $29.8 \%$ for influenza and $19 \%$ for pneumonia. The top healthcare practitioner needed is women's health (54.3\%). Other needed healthcare practitioners include: cancer care (46.4\%), family practice (43.6\%), cardiac (41.8\%), pediatric (39.8\%), eldercare (38.8\%), and dental (38.4\%).

The areas identified which could address improvement related to Maternal/Child Health included: educating students about positive choices; developing mentoring programs; increasing public awareness of existing resources; increasing involvement in HOPE classes; increasing community involvement in school; pooling community resources to get most impact with funds available; implementing alternative schooling methods; increasing child/maternal services; increasing Healthy Start clients; setting up a mobile clinic; increasing satellite clinics for WIC, TB, TCCC; and recruiting volunteer health liaisons.

The workgroup identified barriers and/or challenges that would inhibit progress toward community health improvement. These barriers/challenges included: lack of recreation; budget cuts and lack of resources; lack of transportation; single-parent families and poor parental influences; lack of consequences; drug and alcohol use; media influence; and lack of employment.

The workgroup identified the goal of Improve holistic health of children in Holmes County as one way to impact this issue. An action plan was developed for this goal.

| Priority Issue: | Maternal/Child Health |
| :--- | :--- |
| Goal (Aim): | Improve holistic health of children in Holmes County. |

Objective \#1: By August 30, 2013, increase utilization of local Maternal/Child Health (MCH) services by 5\% in Holmes County.

Objective \#2: By June 30, 2013, decrease teen pregnancy rates by 2\% in Holmes County.

| Priority Issue | Maternal/Child Health (MCH) |  |  |  |  |  |

## Appendix A Workgroup Brainstorming Worksheet

## Brainstorm Worksheet

Thank you for agreeing to participate in the Holmes County Health Department Community Health Improvement Initiative. Please complete this worksheet prior to attending the July $15^{\text {th }}$ session. July 15, Friday - 9:30am-3:30pm
Doctors Memorial Hospital
2600 Hospital Drive
Bonifay, FL 32425
What about Holmes County makes it a healthy place for you and your family to live?
(Personal health, environmental health, safety, etc. - all aspects of health)

What about Holmes County needs to be changed to make it a healthier place for you and your family to live?

When you think of the Holmes County community, what makes you or your family feel most proud?

When you think of the Holmes County community, what makes you or your family feel most concerned?

What do you think are the two or three most important things that can help a community like ours be as healthy as possible?

What suggestions do you have for improving Holmes County, especially the health of its residents?

What is occurring (or might occur) that affects the health of our community or the local public health system?"

What specific threats or opportunities are generated by these occurrences?"

## Appendix C <br> July 15, 2011 Workshop Outcomes

## ISSUE: Social Economic Health

- Various social and economic factors impact the health of Holmes County residents poverty, lack of education, faith based community, social activities, slow growth of population.
- Too small of an economic base resulting low incomes, lack of jobs and industry.
- A lack of education, financial resources \& job opportunities can contribute to substance abuse, child abuse, teen pregnancy, and unhealthy lifestyle practices.
- Alcohol \& substance abuse, a lack of education \& poor parenting skills can lead to an increase in suicides \& homicides.
- The socioeconomic factors within Holmes County are impacted by lack of jobs, lack of education, drug use, and lack of transportation; cultural practices.
- Limited resources
- Limited education
- Culturally learned limitations
- Lack of jobs
- Teen pregnancy
- Limited job availability
- Uninsured
- Alcohol \& drug abuse
- Mental health

## SWOT ISSUE: Social Economic Health

## INTERNAL - Strengths

- Jobs
- DOH
- LIP program
- Hospital - specialty care
- Extended clinic hours
- Chamber of Commerce
- Development Commission
- Civic Clubs
- Ability to draw manpower for new business
- Grants
- Tax cuts (paying taxes)
- Employers - school system, DOC, daycares, courthouse, LE, nursing home, etc.
- TCCC
- Ministerial Assn
- EIC - pays for daycare
- Excellent community collaboration
- WIC
- Church/faith based orgs
- LMC
- Board of county commissioners
- Ag ext office
- Room for growth
- Faith based organizations
- Development commission
- Traditional mindset
- Healthy Start
- DOC Schools
- Law enforcement
- Life mgmt.
- Families
- Health care professionals

## INTERNAL - Weaknesses

- Lack of local colleges
- Travel to higher education
- Lack of network to organize volunteer programs to expose people to new opportunities.
- No financial incentives for new industry
- No infrastructure for new businesses
- Low population - cannot support businesses
- High crime rate
- Lack of job opportunities/Increasing unemployment
- Drug abuse
- Child abuse
- Unhealthy lifestyle
- Lack of motivation to finish education
- Shortage of health care professionals
- Managed health care
- Increased homicide \& suicide deaths
- Lack of resources, grants, funding, programs, transportation
- Rural community
- Cultural norms, low expectations
- Drug \& ETOH abuse
- Depression/mental illness
- Lack of knowledge of internal \& external available resources
- Low population
- Transportation
- Traditional mindset
- Cut back at state, county, federal
- Budget cuts; County Commission
- Liquor stores
- Lack of law enforcement
- Gangs
- Poverty
- Parties

- SWAT
- Health clinics

## INTERNAL - Weaknesses (harmful)

- Poor support systems (home)
- Poor (self) decisions (in need of more positive role models)
- Social media
- Issue-No mental health provider
- Trend - Teen pregnancy show higher than state levels
- Alcohol/drug abuse
- Factor to consumer, liquor store density
- Health behavior - smoking, diet, exercise, alcohol use; all ages cultural factors impact it.
- Liquor stores
- Lack of motivation
- Reduction in State grants
- Unutilized resources
- Learned negative behaviors
- Risky behaviors
- Lack of job skills
- Social media
- Legislature
- Lack of jobs
- Drugs
- Gangs

## EXTERNAL - Opportunities (helpful)

- Education
- Farmer's market
- Mentors
- More partnerships
- Seek more grants
- Multi-county projects
- National org
- Mentors/positive peers
- Boys/Girls Clubs
- FFA
- Ministry assn
- Media

## EXTERNAL - Threats (harmful)

- Budget cuts
- Lack of healthy choices:
- Food - restaurant/fast food
- Grocery vs Veg market
- Funding cuts
- Job losses
- Drugs
- Gangs
- Prisons - influx of inmate families
- Federal laws

## ISSUE: Child Maternal Health

## Partners

- The lack of recreation (jobs \& resources) contributes to repeat births.
- The lack of education \& poverty contributes to poor infant \& maternal health and premature deaths.
- Poor support systems at home lead to poor problem solving and decision making.
- The health of our children \& women of childbearing age have worsening trends or \% above the State average regarding births to teen moms, low birth weight babies, repeat teen pregnancies, entry into prenatal care, breast feeding, infants in foster care, chromosomal abnormalities, children receiving mental health \& obesity R/T low self- esteem, lack of parental supervision, drugs, no birth control use, poverty, lack of education, lack of transportation.

## SWOT ISSUE: Child Maternal Health

## INTERNAL - Strengths

## INTERNAL - Weaknesses

- Faith based orgs
- Ministerial assn.
- Health Start
- Early Childhood Coalition
- Head Start
- WIC
- Life mgmt.
- DCF
- Law enforcement
- Still a close knit community - good family-like environment
- HCHD
- DMH specialty clinic
- WIC
- TCCC
- BAC
- Daycares
- Healthy Start Coalition
- Early Childhood Coalition
- Dental clinic
- Local docs
- Cost of services
- Lack of public transportation
- Service unavailable in immediate area
- Poor values taught at home
- Staff spread thin
- Not utilizing available services
- \% of non-productive population too high
- Increase of drugs/prescription drugs
- Unemployment
- Good parental supervision declining
- Factors impact poor lifestyle choices
- Lack of motivation
- Traditionally poor diet habits
- Parents in jail
- No baby spacing (2 years)
- Limited funds
- Not using resources available
- Single parent homes
- Cultural-poor parenting
- Lack of knowledge of resources
- Meth use

## EXTERNAL - Opportunities

- Salvation Army
- School board
- Chamber of commerce
- County commissions
- Media
- Social pressure by peers
- More recreation activities for kids, encourage parents to take the kids \& do the transporting, instead of depending on others.
- Mentorship
- Daycares
- Mothers who initiate breastfeeding
- DCF
- LE
- LMC
- Faith based
- Local newspaper
- School system
- ELC
- VPK
- Local docs
- CHS
- Transportation agency
- Mentoring

## EXTERNAL - Threats

- Low incomes
- Lack of industry
- Lack of insurance
- Lack/limited transportation
- Government regulation
- Legislation - people are encouraged to live on govt \& not work, can make more by having kids \& staying home, $25-35 \mathrm{y} / \mathrm{o}$ impacted, factors hinder the issue.
- Legislation - enabling (promoting) abuse of free health care, not using it for what it was intended for.
- No insurance due to individuals unable to afford, going to ER (after hours) instead of Dr. office for care.
- Overall funding cuts
- Media
- Births to ages $15-18$ greater than State
- Lack of providers
- Lack of education
- Drug use in this county
- Domestic violence
- Poverty
- Parents not paying child support

## Issue: Access to Options/ Facilities that promote Healthy Living

- The lack of recreational resources directly contributes to chronic disease.
- There is a limited number of facilities in Holmes County to enable healthy living recreational, medical, and emergency.
- A lack of transportation, youth activities, parental involvement \& other community resources can hinder access to health care \& development of health lifestyles.

## Partners

- FEMA
- Emergency mgt statewide
- Fire dept
- Mental health providers
- Police
- BOCC
- Highway patrol
- Assisted living facilities
- State-hinder
- Kiwanis
- Schools
- Health dept

## Issue: Healthcare Availability/Accessibility

- Limited specialty care
- Limited access to health care contributes to high chronic disease rates.
- There is a lack of quality specialized care in Holmes County - dental, heart disease, mental health, diabetes.
- Health care opportunities available but underutilized.
- Cutbacks and elimination of govt programs, diminished services available.

## County Health Rankings Mobilizing Action Toward Community Health

## 2011 <br> Florida

## Introduction

Where we live matters to our health. The health of a community depends on many different factors, including quality of health care, individual behavior, education and jobs, and the environment. We can improve a community's health through programs and policies. For example, people who live in communities with ample park and recreation space are more likely to exercise, which reduces heart disease risk. People who live in communities with smoke-free laws are less likely to smoke or to be exposed to second-hand smoke, which reduces lung cancer risk.

The problem is that there are big differences in health across communities, with some places being much healthier than others. And up to now, it has been hard to get a standard way to measure how healthy a county is and see where they can improve.

The Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute are pleased to present the 2011 County Health Rankings, a collection of 50 reports that reflect the overall health of counties in every state across the country. For the second year in a row, counties can get a snapshot of how healthy their residents are by comparing their overall health and the factors that influence their health with other counties in their state. This allows communities to see county-to-county where they are doing well and where they need to improve.

Everyone has a stake in community health. We all need to work together to find solutions. The County Health Rankings serve as both a call to action and a needed tool in this effort.

## TAKE ACTION WORK TOGETHER

All of the County Health Rankings are based upon this model of population health improvement:

## Health Outcomes

## Health Factors

## Programs and Policies

In this model, health outcomes are measures that describe the current health status of a county. These health outcomes are influenced by a set of health factors. These health factors and their outcomes may also be affected by community-based programs and policies designed to alter their distribution in the community. Counties can improve health outcomes by addressing all health factors with effective, evidence-based programs and policies.

To compile the Rankings, we built on our prior work in Wisconsin, obtained input from a team of expert advisors, and worked closely with staff from the National Center for Health Statistics. Together we selected a number of population health measures based on scientific relevance, importance, and availability of data at the county level.

For a more detailed explanation of our approach, the methods used to compile the Rankings, information on the action steps communities can take to improve their health, and examples of communities in action, see www.countyhealthrankings.org

## The Rankings

This report ranks Florida counties according to their summary measures of health outcomes and health factors, as well as the components used to create each summary measure. The figure below depicts the structure of the Rankings model. Counties receive a rank for each population health component; those having high ranks (e.g., 1 or 2 ) are estimated to be the "healthiest."

Our summary health outcomes rankings are based on an equal weighting of mortality and morbidity measures. The summary health factors rankings are based on weighted scores of four types of factors: behavioral, clinical, social and economic, and environmental. The weights for the factors (shown in parentheses in the figure) are based upon a review of the literature and expert input, but represent just one way of combining these factors.

County Health Rankings model ©2010 UWPHI

The maps on this page display Florida's counties divided into groups by health rank. The lighter colors indicate better performance in the respective summary rankings. The green map shows the distribution of summary health outcomes. The blue displays the distribution of the summary rank for health factors.

Maps help locate the healthiest and least healthy counties in the state. The health factors map appears similar to the health outcomes map, showing how health factors and health outcomes are closely related.

## HEALTH OUTCOMES

HEALTH FACTORS

## Summary Health Outcomes \& Health Factors Rankings

Counties receive two summary ranks:

- Health Outcomes
- Health Factors

Each of these ranks represents a weighted summary of a number of measures.

Health outcomes represent how healthy a county is while health factors are what influences the health of the county.

| Rank | Health Outcomes | Rank | Health Factors |
| :---: | :---: | :---: | :---: |

| 67 | Union | 67 | Madison |
|  |  |  |  |

## Health Outcomes Rankings

The summary health outcomes ranking is based on measures of mortality and morbidity. Each county's ranks for mortality and morbidity are displayed here. The mortality rank, representing length of life, is based on a measure of premature death: the years of potential life lost prior to age 75.

The morbidity rank is based on measures that represent health-related quality of life and birth outcomes. We combine four morbidity measures: self-reported fair or poor health, poor physical health days, poor mental health days, and the percent of births with low birthweight.

| Rank |  | Mortality |
| :--- | :--- | :--- | Morbidity

| Rank | Mortality | Morbidity |
| :--- | :--- | :--- |
| 41 | DeSoto | Hillsborough |
| 42 | Highlands | Columbia |
| 43 | Marion | Osceola |
| 44 | Nassau | Pasco |
| 45 | Hamilton | Suwannee |
| 46 | Jackson | Duval |
| 47 | Citrus | Okeechobee |
| 48 | Jefferson | Walton |
| 49 | Duval | Dixie |

| 63 | Madison | Putnam |
| 64 | Holmes | Washington |
| 65 | Dixie | Liberty |
| 66 | Putnam | Gadsden |
| 67 | Union | Hamilton |
|  |  |  |

## Health Factors Rankings

The summary health factors ranking is based on four factors: health behaviors, clinical care, social and economic, and physical environment factors. In turn, each of these factors is based on several measures. Health behaviors include measures of smoking, diet and exercise, alcohol use, and risky sex behavior. Clinical
care includes measures of access to care and quality of care. Social and economic factors include measures of education, employment, income, family and social support, and community safety. The physical environment includes measures of environmental quality and the built environment.

| Rank | Health Behaviors | Rank | Clinical Care | Rank | Social \& Economic Factors | Rank | Physical Environment |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Minority Populations and Environmental Justice

[Insert appropriate agency definition of minority here. For example: The US Department of Transportation Order on Environmental Justice (April 1997) defines a "minority" as a person who is Black, Hispanic, Asian American, or American Indian/Alaskan Native. "Minority population" is defined as "any readily identifiable groups of minority persons who live in geographic proximity, and if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed DOT program, policy or activity."] County data indicate that minorities live in the project area. Additional analyses are needed to determine if the project will result in disproportionately high and adverse effects to minorities and minority populations.

## Income Data

#### Abstract

Census Total: Population for whom poverty Geographies Counties Holmes County Florida States Florida 15,605,367 12.5 Source: U.S. Census 2000 SF3 Table P87 ${ }^{1}$ Small area Census geographies are named by their FIPS codes (State FIPS-County FIPS-Tract FIPS \& Block group FIPS).

## Low Income Populations and Environmental Justice

[Insert appropriate agency definition of low income here. For example: US Department of Transportation Order on Environmental Justice (April 1997) defines "low income" as a person whose median household income is at or below the Department of Health and Human Services (DHHS) poverty guidelines. "Low income population" is defined as "any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed DOT program, policy or activity."] The 2011 DHHS poverty guideline for a family or household of four is $\$ 22,350$. Data in the Income Data table were collected in 1999, and the 1999 DHHS poverty guideline for a family or household of four is $\$ 16,700$. County data show that the median household income in 1999 for all counties is greater than the 1999 DHHS poverty guideline. However, the data indicate that low income individuals live in the project area. Additional analyses are needed to determine if the project will result in disproportionately high and adverse effects to low income individuals.

## Transportation Data

## Limited English Proficiency (LEP)

Executive Order 13166 "Improving Access to Services for Persons with Limited English Proficiency" requires all recipients of federal funds to provide meaningful access to persons who are limited in their English proficiency (LEP). The United States (U.S.) Department of Justice defines LEP individuals as those "who do not speak English as their primary language and who have a limited ability to read, write, speak, or understand English" ( 67 FR 41459). Data about LEP populations was gathered in the U.S. Census 2000. For data analysis purposes, the Census divides the states of the United States into counties.

Within area counties, Census data record the presence of persons who describe their ability to speak English as less than "Very Well." The table below shows the percentages of adults who speak English less than "Very Well" by language category. Additionally, 27 households or $0.4 \%$ of households within area counties reported to the Census that their household was linguistically isolated, meaning that all household members over the age of fourteen had at least some difficulty with English. Thus, Census data indicate the presence of LEP populations.

## Counties

Holmes
$\begin{array}{llllll}\text { County } & 14,275 & 0.8 \% & 0.5 \% & 0.2 \% & 0.1 \%\end{array}$
Florida
States
$\begin{array}{llllll}\text { Florida } & 12,347,806 & 8.5 \% & 1.9 \% & 0.6 \% & 0.2 \%\end{array}$
Source: U.S. Census 2000 SF3 P19 for persons age 18 and older.

* The data on ability to speak English represent the Census respondent's own perception about his ability to speak English (United States Census 2000 Metadata).

Since LEP is partially defined as a limited ability to read and write English, literacy data were also consulted. Indirect literacy estimates for adults were calculated by the National Center for Education Statistics based on 2003 survey data for states and counties. The percentage of adults who lack basic prose literacy skills for Holmes County and Florida are 17\% and 20\% respectively. ${ }^{1}$ While literacy estimates do not differentiate between low literate English speakers and low literate LEP populations, literacy data should be considered along with other LEP indicators in determining how to best provide access to LEP populations. In conclusion, the data indicate the likelihood of LEP populations in the area.

To determine the languages of the LEP populations, Census data were consulted for project area counties. The table below details the top five languages spoken by the total adult population (LEP and non-LEP) for each county.

Top Five Languages Spoken by the Adult Population

| Census <br> Geographies | Language <br> $\mathbf{1}$ |  | Language 2 | Language <br> $\mathbf{3}$ | Language <br> $\mathbf{4}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Counties |  |  |  |  |  |

Source: U.S. Census 2000 SF3 PCT10 for persons age 18 and older.
Therefore, the counties data does not indicate the presence of LEP language groups that exceed the Department of Justice's Safe Harbor threshold of $5 \%$ or 1,000 persons. [However, the following measures will be taken to ensure LEP persons meaningful access: enter any measures to be taken to ensure meaningful access if applicable]. Thus, the requirements of Executive Order 13166 appear to be satisfied.

## Footnotes

1. See http://nces.ed.gov/naal/estimates/Cautions.aspx for general cautions about indirect literacy estimates.

ACS data are estimates; they are not counts. Each estimate has a margin of error (i.e. +/-12).
*The complete Census race descriptions are as follows: White; Black or African American; American Indian and Alaska Native; Asian; Native Hawaiian and Other Pacific Islander; Some other race; and Two or more races.
**Hispanics may be of any race.
Important Note About Hispanic Data
For more information on understanding race and Hispanic origin data, please see the Census 2000 Brief entitled, Overview of Race and Hispanic Origin, issued March 2001. The ACS questions on Hispanic origin and race were revised in 2008 to make them consistent with the Census 2010 question wording. Any changes in estimates for 2008 and beyond may be due to demographic changes, as well as factors including questionnaire changes, differences in ACS
population controls, and methodological differences in the population estimates, and therefore should be used with caution. For a summary of questionnaire changes see http://www.census.gov/acs/www/methodology/questionnaire_changes/. For more information about changes in the estimates see http://www.census.gov/population/www/socdemo/hispanic/reports.html.

Small area Census geographies are named by their FIPS codes (State FIPS-County FIPS-Tract FIPS-Block group FIPS \& Block FIPS).

## For more information on American Community Survey 2005-2009, see:

http://www.census.gov/acs/www/guidance_for_data_users/guidance_main
Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2005-2009 American Community Survey (ACS) data generally reflect the November 2008 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

## Explanation of Symbols:

1. An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An ' + ' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An ${ }^{\prime} * * *$ ' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An ${ }^{\prime} * * * * * '$ entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

## End Notes

Small area Census geographies are named by their FIPS codes (State FIPS-County FIPS-Tract FIPS-Block group FIPS \& Block FIPS).

## For more information on American Community Survey 2005-2009, see:

http://www.census.gov/acs/www/guidance_for_data_users/guidance_main
Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2005-2009 American Community Survey (ACS) data generally reflect the November 2008 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

## Explanation of Symbols:

1. An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An ' $* * * * *$ ' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An ' N ' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

## End Notes

Small area Census geographies are named by their FIPS codes (State FIPS-County FIPS-Tract FIPS-Block group FIPS \& Block FIPS).

## For more information on American Community Survey 2005-2009, see:

http://www.census.gov/acs/www/guidance_for_data_users/guidance_main
Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2005-2009 American Community Survey (ACS) data generally reflect the November 2008 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

## Explanation of Symbols:

1. An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An ' + ' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An ${ }^{\prime} * * *$ ' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An ${ }^{\prime} * * * * *$ ' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data for 1999 and subsequent years are not fully comparable to data from 1998 and prior years, due to changes in coding of causes of deaths resulting from the switch from the ninth revision of the International Classification of Diseases (ICD9) to the tenth revision (ICD10).

Age-adjusted death rates are computed using the year 2000 standard population.

*Actual causes of death are the major external (nongenetic) factors that contribute to death in the US, first identified by McGinnis and Foege in 1993. These three sets of behaviors each contribute to over 100,000 deaths annually in addition to their impact on morbidity, quality of life, and public health burden.

report, a low quartile number (1) always represents more favorable health situations while fours (4) represent less favorable situations.

## ${ }^{B}$ County Trends

As with rates, there is also random variation in the trend lines of these rates, so that a line that slopes upward may not represent a statistically significant increase, particularly if it is based on small numbers. For that reason, we test statistically to determine whether or not we can be at least 95 percent confident that what appears to be an increase or decrease is real, not just the result of random fluctuation.

Trends only calculated for indicators with 12 or more years of data
available. Click here for more information about trends

## CHealthy People 2020 Goals

Healthy People 2020 is a national health promotion and disease prevention initiative. Its goals are to increase the quality and years of healthy life and eliminate health disparities. More information available at: http://www.healthypeople.gov. Goals are not available for every indicator.

## Appendix I <br> 2011 Holmes County Health Needs Assessment

## Holmes County

## Community Health Needs Assessment

2011

## Part I: Methodology:

Overview: Big Bend Area Health Education Center, Inc. was contracted to conduct this community needs assessment by the Holmes County Health Department. The assessment format was adapted from a needs assessment completed by the Wisconsin Office of Rural Health to meet the needs of Holmes County, Florida. This report integrates and presents information from two major sources: (1) a secondary analysis of currently existing health and community data on Holmes County, and (2) a primary community health needs assessment survey conducted for Holmes County. This assessment report specifically addresses the health status/needs of Holmes County, Florida within the context of some environmental factors. The narrative portion of this report has been written in a manner, in which the sections can stand alone as a piece for a grant application or proposal.

Procedure for Community Health Needs Assessment: Both primary and secondary methods were utilized for this assessment. A primary survey of Holmes County adults was conducted to determine the overall health status and health needs of the county residents. A 52-item community assessment survey tool was administered for this purpose. A sample of 289 adult Holmes County residents aged 18 years and above was surveyed for this assessment. This number represents about $1.5 \%$ of the county's population from the 2005-2009 population estimates of 19,065 . Assessment surveys were distributed through a series of coordinated efforts organized at local county events which include festivals, health fairs, and access through county area administrative staff. The community assessment project was conducted such that adult residents from all seven designated Holmes County towns were targeted for a representative sample. (See Table showing distribution of surveyed county residents).

## Table Showing Surveyed Residents from each Designated County Town/Communities

| County Towns/Areas | \% of Total $(\mathrm{N}=289)$ |
| :--- | :--- |
| Bethlehem | 12.5 |
| Bonifay | 53.3 |
| Esto | 2.1 |
| Noma | 2.1 |
| Ponce de Leon | 4.5 |
| Poplar Spring | 6.6 |
| Westville | 10 |
| Other | 8.7 |

Existing data on Holmes County were accessed through secondary review of a variety of data published by federal and state sources. Review was focused on data which directly associated with the health status of those residing in Holmes County. Examples of sources include Florida Charts, US Department of Health and Human Services, and US Census Bureau. Assessment report is presented in the narratives following.

## Part II: Demographics and Socioeconomic Characteristics

Holmes County is in the Florida Panhandle and bordered by the state of Alabama in the north. The county's area is around 488.7 square miles, with 482.5 square miles of rural land and 6.3 miles of water. There are five municipalities in Holmes County, with the City of Bonifay being the county seat.

Holmes County demographic and socioeconomic characteristics are compared to the state and national reports where applicable and/or available. Reports of both primary and secondary data analyses are included.

## POPULATION CHARACTERISTICS

The US Census data indicates Holmes Country had a population of 18,564 in 2000 and estimated 19,065 at the 2005-2009 estimates. There was a $2.7 \%$ increase between the 2000 estimate and the 2005-2009 estimates. Holmes County ranks number fifty-five (55) of all the counties in the state for population.

## Population by Age

Age distribution of surveyed county residents
About 30\% of surveyed county residents are male, $65 \%$ female, and a majority are married (54\%). Reported age ranged from 18 to 93 years, with a mean age of 44.98, and standard deviation of 15.5.

Out of the estimated 19,065 people who reside in the county, according to the age distribution of people in Holmes County, Florida in 2005-2009, $22 \%$ are under the age of 18; $61 \%$ are ages 18 to 64; and 17\% are age 65 and older. Among surveyed residents, about $81 \%$ are age $18-64,12.5 \%$ are age 65 and older.

|  | Age Profile |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | Holmes County |  |  | Florida |
| Age | Number | \% of Total | $\%$ of Total | \% of Total |
| Under age 5 | 1159 | $6.1 \%$ | $6.3 \%$ | $6.9 \%$ |
| Under age 19 | 4678 | $24.5 \%$ | $24.8 \%$ | $27.4 \%$ |
| 18 and over | 14851 | $77.9 \%$ | $77.7 \%$ | $75.4 \%$ |
| 21 and over | 14234 | $74.7 \%$ | $73.9 \%$ | $71.0 \%$ |
| 62 and over | 3815 | $20 \%$ | $20 \%$ | $15.3 \%$ |
| 65 and over | 3147 | $16.5 \%$ | $16.9 \%$ | $12.6 \%$ |
| Median Age | 40.2 |  | 39.7 | 36.5 |

## Population by Gender

About $30 \%$ of surveyed county residents are male and $65 \%$ are female.
See Table below.

## Population by Race

Eighty-one percent of surveyed residents reported their race as white and $8.3 \%$ reported as black. Other races reported are Asian (.4\%), Native American (1.4\%), White Hispanic (1.4\%), Black Hispanic (.3\%), and Multi-racial (1.7\%). Details provided in table below.

Ninety percent (90\%) of the Holmes County's population is white, according to the 20052009 American Community Survey 5-Year Estimate Narrative. This percentage is considerably higher than the state percentage of $76.6 \%$ and $74.5 \%$ for the nation. Five (5) percent of the population is black, a rate considerably lower than the state rate of $15.4 \%$. Other races reported by the survey: 1 percent responded American Indian and Alaska Native; less than 0.5 percent Asian; 1 percent Native Hawaiian and Other Pacific Islander, and less than 0.5 percent some other race. Three percent (3\%) reported two or more races and 2 percent Hispanic.

Population Growth Rate

| Name | Census 2000 | Census 2010 | Population Growth |

## Population by Education

Community assessment survey placed status of education for the majority of residents (> $69 \%$ ) surveyed at high school or less. These finding are consistent with low patterns report in the 2005-2009 U.S. Census estimates for the county. Details provided in table below.

Table showing education profile

| Education | Percent of total |
| :--- | :--- |
| <High School | 20.1 |
| High School | 49.1 |
| Associate Degree | 10 |
| Bachelors | 9.0 |
| Masters/Graduate | 3.5 |
| Other | 2.8 |

The Florida Department of Education School District directory lists seven (7) public schools and one (1) private school in the Holmes Country School District, with the following breakdown: two (2) high schools, two (2) schools with K through 12, two (2) elementary, and one (1) middle school, the one (1) private school consists of middle to school to high school grades. The National Center for Educational Statistics reports there are 3371 students in the Holmes County School District based on the 2005-2009 U.S. Census estimates. The percentage of persons in Holmes County who have less than a high school diploma exceeds both the state and national rates at $26 \%$. Details provided in table below.

[^1]
## Population by Marital Status

Majority (54\%) of surveyed Holmes County residents are married. Details provided in table below.

Table Showing Marital Status of Surveyed Residents

| Status | Percent of Total |
| :--- | :--- |
| Married | 54 |
| Divorced | 17 |
| Widowed | 5.9 |
| Separated | 3.8 |
| Never married | 10.4 |
| Unmarried couple | 2.8 |
| Don't want to answer | 1.4 |

## SOCIOECONOMIC CHARACTERISTICS

## Income

Community assessment surveys show that majority of residents (16.6\%) reported annual income of less than \$9,999. Overall, more than 57\% earn less than \$30,000 annually. Details provided in table below.

Table Showing Income Distribution of Surveyed Residents

$$

According to the Bureau of Labor Statistics, Holmes County reported at $\$ 490$ as the average weekly wage. This is the lowest weekly wage of all the counties in the state of Florida in the $3^{\text {rd }}$ quarter of 2010.

## Median Household Income

The median income for households in Holmes County was $\$ 33,868$ (US Census Bureau 2005-2009 American Community Survey). Holmes County's personal per capita income for 2009 was $\$ 26,151$. Nearly $49 \%$ lower than the reported state per personal, per capita income of $\$ 38,965$. (Bureau of Economic Analysis, U.S. Department of Commerce) In comparison to other nonmetropolitan areas around the state, Holmes County's personal per capital income is still nearly $12 \%$ lower than the reported average of \$29, 272.

## Employment Status

From the community assessment survey data, about $51 \%$ of county residents have full time employment and as much as 29\% are unemployed. Weekly work hours range from 2-40 hours with average of about 20 hours. Detailed descriptions are provided in the tables following.

Table Showing Current Employment Status

|  | Percent |
| :--- | :--- |
| Not employed | 29.1 |
| Self-employed | 7.3 |
| Part-time | 6.6 |
| Full time | 50.9 |
| Hours per week <br> $\bullet \quad$ Range 2-40 <br> $\bullet$ mean -19.92; SD=11.07 |  |

Table Showing Reason for Unemployment

|  | Percent |
| :--- | :--- |
| Disabled | 26.2 |
| Cannot find work | 16.67 |
| Retired | 28.57 |
| Taking care of family | 13.1 |
| Need Training | 2.4 |
| Other | 13.1 |

Table Showing Availability of Jobs

|  | Percent |
| :--- | :--- |
| Enough jobs | 3.8 |
| Not enough jobs | 91.0 |

The unemployment rate in Holmes County for the most part has remained consistently lower than that of the nation and of the state of Florida, as illustrated by the graph below.

Source: Agency for Workforce Innovation, Local Area Unemployment Statistics, 2011

## Labor Force Participation

The labor force is defined as the number of persons who are age 16 and older who work or are actively seeking employment. Persons who are not members of the labor force include: the retired, students, not able to perform available work, disabled, and those who perceive there is no available work in which they can perform. Using information from the U.S. Census and the State of Florida, it is determined that around $42 \%$ of Holmes County residents comprise the labor force. Almost half of the persons residing in Holmes County work or are actively seeking work. The percentage of participants is likely to increase when new workers enter the workforce.

## Poverty Level

Persons in Holmes County living in poverty are 18\%, compared to the state rate of $13 \%$. Estimated $26 \%$ of children live in poverty, a rate that is higher than the national and the state rates of $18 \%$ respectively. Details provided in table below.

## Poverty Rates from U.S. Census Bureau

Source: US Census

## Health Insurance Status

According to survey data, about 47\% of surveyed residents have health insurance coverage. Of the various types of insurance coverage listed, majority (19.7\%) are covered under the Medicaid program. A significant number of residents were noted to have no health insurance (19\%) and have to pay for healthcare out of pocket ( $20 \%$ ). Details provided in table below.

Table Showing Type of Type Payment for Healthcare

| Insurance Type | Percent |
| :--- | :--- |
| No Insurance | 19.4 |
| Health Insurance | 47.1 |
| Medicaid | 19.7 |
| Medicare | 15.6 |
| Active Military | .3 |
| Champus | 2.8 |
| Kidcare | 4.5 |
| Veteran | 1 |
| Out of Pocket | 20.1 |
| Other | 3.5 |

The secondary data review of Medicaid Monthly Enrollment Counts for all Races and Sexes for 2009 reveals an average of 4980 enrollees for Holmes County. (Florida Charts, 2011) Considering the 2005 to 2009 Census Estimate of 19065 for Holmes County's population, it can be concluded that around $26 \%$ of Holmes County residents are enrolled in Medicaid.

## HOUSEHOLD CHARACTERISTICS

From the county surveys, majority of residents ( $56.1 \%$ ) own their homes and are satisfied $(66.4 \%)$ with their housing situation. Details provided in tables below.

Table Showing Type of Housing

|  | Percent |
| :--- | :--- |
| Rent | 21.5 |
| Own | 56.1 |
| Live with other | 9.7 |
| Other | 7.6 |

Table Showing Satisfaction with Housing

|  | Percent |
| :--- | :--- |
| Satisfied | 66.4 |
| Not Satisfied | 26.3 |

Table Showing Reason for Not Satisfied with Housing

|  | Percent |
| :--- | :--- |
| Too small/crowded | 46.1 |
| Problem with others | 11.8 |
| Too run down | 30.3 |

| Other | 17.1 |

As of the American Community Survey 5-Year Estimate Narrative 2005-2009, there were 8,400 housing units, 19 percent were vacant. 64 percent were single-unit structures, 5 percent multi-unit structures, and 31 percent mobile homes. $21 \%$ of the homes in Holmes County were built prior to 1990. Around $60 \%$ of the owner occupied homes are valued at less than $\$ 99,000$, from that number $32.3 \%$ are less than $\$ 50,000$. More than $75 \%$ of Holmes County residents use $30 \%$ or more of their income for housing. $9 \%$ of these households do not have telephone service and $8 \%$ reported not having access to a vehicle for personal use. There are 6,800 households in Holmes County with an average of 2.5 persons per household. Pertinent household characteristics are provided in the following table.

| Household Characteristics |  |  |  |
| :--- | :--- | :--- | :--- |
|  | Holmes <br> County | Florida | US |
| Households containing married couples with children | $17.9 \%$ | $17.8 \%$ | $21.4 \%$ |
| Household containing single parent with children | $7.9 \%$ | $9.2 \%$ | $9.5 \%$ |
| Householder living alone | $24.7 \%$ | $25 \%$ | $27.3 \%$ |

## LEADING CAUSES OF DEATH

Leading causes of death among Holmes County residents were evaluated from self-report of personal and immediate family member/s diseases status. Of the 15 leading causes of death listed in 2009 by Kochanek and colleagues, five were found prevalent in varying degrees among county residents surveyed - hypertension (51\%), diabetes (27.7\%), heart disease (15.6\%), lung disease (12.2\%), cancers (11.1\%). High rates of other diseases - overweight/obesity (30.1\%) and arthritis (24.2\%) were also found. Details provided in table below.

Table Showing Reported Chronic Diseases Status

| Disease Type | Percent of Total |
| :--- | :--- |
| Hypertension | 51.2 |
| Overweight/Obesity | 30.1 |
| Diabetes | 27.7 |
| Arthritis | 24.2 |
| Hearing/Vision loss | 16.3 |
| Heart disease | 15.6 |
| Lung disease | 12.1 |
| Cancer | 11.1 |
| Alcohol dependency | 5.2 |
| Hepatitis | 3.5 |
| HIV/AIDS | 0 |
| Other | 7.6 |

Ten leading causes of death in Holmes County are listed below. These vary in order from the national list if leading causes of death (Kochanek et al., 2009). Details provided in table below.

Ten leading causes of death in Holmes County

|  | Holmes County |
| :--- | :--- |
| Heart disease | $36.2 \%$ |
| Cancer | $18.1 \%$ |
| Unintentional injuries | $8.1 \%$ |

## LEADING HEALTH INDICATORS AND RISK FACTORS

Assessment of Holmes County community health needs takes into account personal and community health status as well as the key community health indicators and risk factors per Healthy People 2010 recommendations. Key health indicators determined to have relevance for the health status of county residents are: access to health care; overweight and obesity; substance use; activity; responsible sexual behavior; mental health; immunization; tobacco use; and environment quality.

## Personal and Community Health Status

Most residents reported a personal health status that is healthy to very healthy (61.6\%). However, a significantly large number (37.7\%) reported personal health that is somewhat unhealthy to very unhealthy. Overall, Holmes County was rated by almost $35 \%$ of residents surveyed as a somewhat healthy to very healthy community. This is far lower than a rating of somewhat unhealthy to very unhealthy by $56 \%$ of residents. Details provided in tables below.

Table Showing Self-rated Health Status

| Status | Percent of Total |
| :--- | :--- |
| Very Unhealthy | 3.1 |
| Unhealthy | 7.3 |
| Somewhat Unhealthy | 27.3 |

| Healthy | 53.3 |
| :--- | :--- |
| Very Healthy | 8.3 |

Table Showing Rating of County Community Health Status

|  | Percent |
| :--- | :--- |
| Very Unhealthy | .5 |
| Unhealthy | 12.5 |
| Somewhat unhealthy | 43 |
| Healthy | 33.9 |
| Very Healthy | .7 |

## Personal Health Limitations

Surveyed county residents reported on types and length of health limitations experienced. About $23.2 \%$ reported having average of 12.43 days when physical health was not good and $17 \%$ reported average of 11.49 days when mental health was not good. Interference from physical/mental health was reported by $24.6 \%$ of county residents and $31.8 \%$ reported interference from pain. Number of days that interference was experienced from pain averaged 14.77 days for $23 \%$ of county residents and 15.25 days of interference from Physical and Mental health for $17.6 \%$ resident. Details provided in tables below.

Table of Days Physical and Mental Health Not Good

|  | Physical Health |  | Mental Health |  |
| :--- | :--- | :--- | :--- | :--- |

| Don't Know | - | $7.6 \%$ | - | $9 \%$ |

## Access to Health Care

Reports show that within the past one year, $66 \%$ of residents have visited a doctor. Numbers increasingly worsens for dental visit (47\%), eye examination (43.3\%), and teeth cleaning (38.4\%). Also, a good number of residents have not received these services within the past two to five years or do not know or have never received services. On the reason for not receiving eye exam either within the past 2 years or more or never had any exam, majority (31.6) indicated no reason while another large number (30.3) cited cost/no insurance.

Table Showing Healthcare Visits

|  | Visit $\operatorname{Dr}(\%)$ | Visit dentist (\%) | Clean Teeth (\%) | Eye-exam (\%) |
| :--- | :--- | :--- | :--- | :--- |
| Within past year | 66.1 | 47.1 | 38.4 | 43.3 |

| Unable to get healthcare | 11.8 |

| Not needed | 9.0 |
| :--- | :--- |

Several vital health services are obtained outside of the county by residents within the past year. Top on the list of services in descending order are Lab work (47.4\%), emergency care (36.7\%), general practitioner care (34.9\%), eyecare (33.9\%), dental care (30.8\%), radiology (23.3\%), obstetrical/gynaecological care (18.7\%), and inpatient care (17.6\%). Main reasons why services were sought outside of county by residents were given as being the choice of doctor ( $43.3 \%$ ). Of significance also is the report by $19 \%$ of residents of no doctor in the county providing the service needed.

Table Showing Services Received Outside of the County

| Service Type | Percent |  | Percent |
| :--- | :--- | :--- | :--- |
| None | 14.5 | Immunization | 17 |
| Lab work | 47.4 | General Practitioner care | 34.9 |

Reason for healthcare received outside of county

| Reason | Percent of Total |
| :--- | :--- |
| Doctor of choice | 45.3 |
| No provider in county | 19 |
| Insurance cover only for doctor outside | 5.2 |
| Doctors not taking Medicaid | 4.5 |

Residents identified groups of individuals perceived to have the most difficulty obtaining healthcare as the uninsured ( $37 \%$ ), older adults (37\%), unemployed (35\%), and middle aged (32.5\%).

Table Showing Individuals perceived to have the most difficulty obtaining health care services

|  | Percent |
| :--- | :--- |
| Uninsured | $37 \%$ |
| Older Adults and Low Income | 37 |
| Unemployed | 34.9 |
| Middle age | 32.5 |

Within the last year, county residents spent an average of about one night in the emergency, had less than one time of overnight stay in the hospital, and a little over one night of total stay in the hospital.

Table of Hospital care access and utilization within the past one year

|  | Range | Average Utilization | Majority Reported |
| :--- | :--- | :--- | :--- |
| Times in ER | $0-22$ | Mean $=.92(\mathrm{SD}=2.08)$ | $0(57.8 \%)$ |
| Nights in Hospital | $0-10$ | Mean $=.37(\mathrm{SD}=1.13)$ | $0(70.9 \%)$ |
| Length of Hospital stay | $0-45$ | Mean $=1.2(\mathrm{SD}=4.08)$ | $0(69 \%)$ |

Need for mental health resources such as crises care, hospitalization, and counseling/therapy by county residents were generally modest, with highest rates for counseling/therapy services (10\%) in the past year. Majority ( $40 \%$ ) reported they were able to get health services from within the county while an equally significant number (23\%) reported they were not able to receive services within the county.

Table of Mental Healthcare Needs and Utilization within the past year

|  | $\%$ of Total |
| :--- | :--- |
| None | 78.9 |
| Crisis care | 3.5 |
| Hospitalization | 3.1 |
| Counseling/Therapy |  |
| 10.4 |  |
| Able to Get Needed Services in Count |  |
| Not able to get services in county county | $\%$ of Total |

About 14.5\% reported need for longterm care services. Of those who needed long-term care, majority ( $67.65 \%$ ) received services in Holmes County while others (32.35\%) received service outside Holmes County.

| Long-term Care Services |  |
| :--- | :--- |
|  | $\%$ of Total |
| Able to get services in county | 67.7 |
| Got services outside county | 32.4 |

Social service benefits needed by majority of resident were Food Stamps (28.7\%) and Medicaid (27.3\%) and majority (40.5\%) got their social benefits from within the county. An equally good number of residents (17.6\%) did not get these benefits from the county.

Table of Social Service Benefits Needed

| Services | \% of Total | Services | \% of Total |
| :--- | :--- | :--- | :--- |
| None | 45.7 | Medicaid | 27.3 |
| Food stamp | 28.7 | Respite Care | 1.7 |
| Healthy Families Insurance | 5.2 | Subsidized Child care | 4.2 |
| TANF (Welfare) | 4.8 | Other | 5.2 |
| Housing Assistance | 7.3 |  |  |
|  |  |  |  |
|  |  |  |  |
| Able to get services in county | Get Needed Benefit in County |  |  |
| Not able to get services in <br> county | 40.5 | 17.6 |  |

## Overweight and obesity

An estimation of body mass index (BMI) using self-reported height and weight yielded an obese mean BMI of 30.3 for the county.

Table of Body Mass Index Estimation

| Range $-15.5-93.70 ;$ Mean $=30.30(\mathrm{SD}=8.87)$ |  |
| :--- | :--- |
| BMI | Percent of Total |
| Underweight | 1.7 |
| Normal Weight | 23.2 |
| Overweight | 26 |
| Obese | 42.2 |

## Substance use, Tobacco use, Activity, and Responsible sexual behavior

Alcohol and other drug abuse, tobacco use, inactivity, and teenage pregnancy identified by county residents as one of the top 6 health problems within the county. Only $30 \%$ indicated that they always practice safe sex as a preventive health behavior.

Table Showing Most Important health problems within the community

|  | Percent |
| :--- | :--- |
| Alcohol and other drug abuse | 44.64 |
| Chronic diseases | 31.49 |
| Child Abuse/Neglect | 27.34 |
| Poor Diet/Inactivity | 26.30 |
| Teenage Pregnancy | 24.22 |
| Tobacco Use | 18 |

## Mental health

Survey results show that over 70\% of county residents are stressed sometimes or always. Almost $60 \%$ indicated they are depressed sometimes or always, and over $75 \%$ reported they get enough sleep sometimes or always.

Table Showing Percent of Preventive and Safe Lifestyle Practice

| Type of Practice | \%Always | \%Sometimes | \%Never | \%NA |
| :--- | :--- | :--- | :--- | :--- |
| Stressed out | 18 | 60.2 | 5.2 | 1.0 |
| Depressed | 12.8 | 46 | 19.7 | 2.4 |
| Enough sleep | 21.1 | 54.3 | 11.8 | .3 |

## Environment quality

Country was rated as safe to very safe by majority of the residents ( $88.7 \%$ ). However, manufacturing or use of Amphetamine was identified as the most serious safety problem in the community by a majority (59.9\%). Other safety problems are alcohol use (59.8\%), unsafe sex ( $24.9 \%$ ), child abuse ( $22.5 \%$ ), and unsafe roads ( $20.8 \%$ ). Three top factors identified by residents as the most important for a healthy community are good jobs and healthy economy (45.3\%), access to healthcare and services (38.4), and religious/spiritual values (34.95\%). Also listed are low crime and safe neighborhoods, strong family life and good schools. Details are described in the tables following.

Table Showing Rating of County Community Health

|  | Percent |
| :--- | :--- |
| Very Unhealthy | .5 |
| Unhealthy | 12.5 |
| Somewhat unhealthy | 43 |
| Healthy | 33.9 |
| Very Healthy | .7 |

Table Showing Rating of County Community Safety

|  | Percent |
| :--- | :--- |
| Very Unsafe | 3.5 |
| Unsafe | 10.7 |
| Safe | 69.9 |
| Very Safe | 10.7 |

## Table Showing Most Serious Safety Problems

|  | Percent |
| :--- | :--- |
| Manufacturing and use of amphetamines | 59.86 |
| Alcohol use | 59.52 |
| Unsafe sex | 24.91 |
| Child abuse | 22.49 |

| Unsafe Roads | 20.76 |
| :--- | :--- |

Table Showing
Important Indicators of a Healthy Community

|  | Percent |
| :--- | :--- |
| Good jobs and healthy economy | 45.3 |
| Access to health care and services | 38.4 |
| Religious/Spiritual values | 34.95 |
| Low crime and safe neighborhood | 29.4 |
| Strong family life | 27.34 |
| Good Schools | 26.6 |

Places where most county residents use for recreation are the church (52.95\%), parks (47.8\%), and river/lake/beaches/woods (45.33\%). Portion of surveyed residents (27\%) who indicated their desires for recreation places identified choices which are categorized and rated as follows: (1)centers for fitness and sports that include tracks, running, tennis, football swimming, skating, and bowling (89.9\%); (2) outdoor program and environment that promote walking, biking, golf, horse riding, and water access for finishing and boating (30.4\%); (3) activities that foster family and community engagement and meet the activity need for children, teens and seniors (17.7\%); and (4) projects to create better leisure time through activities and programs such as parks, movies, museums, library, trips, mall, and music (20.1\%).

Table Showing Places used for Recreation

|  | Percent |
| :--- | :--- |
| Church | 52.95 |
| Park | 47.8 |
| River/Lake/Beaches/Woods | 45.33 |
| Library | 18.34 |
| Sports field | 14.53 |

## Preventive Health (Immunizations, Preventive Screening, and Lifestyle)

Preventive screening and immunization within the past 12 months showed the following results: Rates of immunization are 29.8\% for influenza and 19\% for pneumonia (not adjusted for age or health condition). Among residents age 40 and older, $51.9 \%$ have performed diabetes screening and $48.8 \%$ have performed vision screening. Among males age 40 and older, 18.6\% have performed prostate digital exam while $23.7 \%$ have performed PSA. Among female residents age 40 and above, 63.4\% have performed mammograms and 30.8\% have performed bone density test. Among residents age 50 and older, colon/rectal screening is $18.3 \%$.

|  | Percent Received <br> Seasonal Influenza <br> Vaccine | Percent Ever Received <br> Pneumonia Vaccine (not <br> adjusted) |
| :--- | :--- | :--- |
| Immunized | 29.8 | 19 |
| Not Immunized | 65.4 | 75.8 |
| Don't know/Not sure | 1.4 | 2.1 |

Table Showing Preventive Screening in the past year (Adjusted for Age Recommendations)

| Type of Screening | Percent | Type of Screening | Percent |
| :--- | :--- | :--- | :--- |
| Mammogram | $63.4^{\star} \pm$ | Vision | $48.8^{\star}$ |
| Pap Smear | $54.5 \pm$ | Hearing | 10.7 |
| Glaucoma | 14.9 | Cardiovascular | 10 |
| Flu Shot | 28.4 | Bone Density | $30.8^{\star \star} \pm$ |
| Colon/Rectal Exam | $18.3^{\star *}$ | Dental | 34.6 |
| Blood Pressure | $51.9^{\star}$ | Prostate Cancer Digital | $18.6^{\star}$ Q |
| Blood Sugar | $51.9^{\star}$ | Prostate Cancer Antigen | $23.7^{*}$ 回 |
| Cholesterol Screening | $43.1^{+}$ | Skin Cancer | 12.5 |

*Screening among residents age 40 and above; ** Screening among residents age 50 and above [0 Males only; $\pm$ Females only; ${ }^{+}$Among age 20 and above.

## Preventive lifestyle (Physical Activity)

About 58\% indicated they participate in physical activities. A significantly large number indicated no participation in physical activity. Detailed description of safe lifestyle practices are reported below.

Table Showing Physical Activity Participation in the past 12 months

|  | Percent |
| :--- | :--- |
| Participates in physical activity | 57.8 |
| No Physical activity | 34.3 |

## Preventive lifestyle (Safety)

Report of safe lifestyle practice among residents show that almost 70\% wear seat belt always, $30.4 \%$ practice safe sex always, $22.8 \%$ perform self-breast exam always. Only about $21 \%$ reported getting enough sleep always.

Table Showing Percent of Preventive and Safe Lifestyle Practice

| Type of Practice | \%Always | \%Sometimes | \%Never | \%NA |
| :--- | :--- | :--- | :--- | :--- |
| Wear Seat Belt | 69.6 | 21.5 | 1.7 | .3 |
| Self-Breast Exam | 22.8 | 31.1 | 20.8 | 9 |
| Safe Sex | 30.4 | 9.7 | 12.5 | .3 |

| Illegal Drug Use | 3.5 | 3.5 | 65.4 | 9.3 |
| :--- | :--- | :--- | :--- | :--- |
| Tobacco Use | 15.6 | 8.7 | 50.5 | 8.0 |
| Second Hand Smoke | 14.5 | 33.6 | 27.3 | 5.5 |
| Enough Sleep | 21.1 | 54.3 | 11.8 | .3 |
| Moderate Exercise | 19.7 | 40.8 | 24.2 | .7 |

## HEALTH CARE RESOURCES

## Healthcare Facilities

Five healthcare services identified as the top need for the county are Walk-in clinics ( $83.7 \%$ ), Wellness Center ( $53.3 \%$ ), Dental service ( $42.2 \%$ ), more health department ( $39.1 \%$ ), and nursing home (34.5\%). Details are described in the table following.

Table Showing Top Five Healthcare Services Needed

|  | Percent |
| :--- | :--- |
| Walk-in clinics | 83.74 |
| Wellness Center | 53.29 |
| Dental service | 42.21 |
| More health department services | 39.10 |
| Nursing home | 34.48 |

## Healthcare Providers

Types of healthcare practitioners identified as most needed were Women's health ( $54.3 \%$ ), cancer care ( $46.4 \%$ ), family practice ( $43.6 \%$ ), cardiac ( $41.8 \%$ ), pediatric (39.8\%), eldercare (38.8\%), dental care (38.4\%). Details provided in table below.

Type of practitioners most needed in the community

|  | Percent |
| :--- | :--- |
| Women's Health | 54.3 |
| Cancer Care | 46.4 |
| Family Practice | 43.6 |
| Heart | 41.8 |
| Pediatric | 39.8 |
| Elder Care | 38.8 |
| Dental | 38.4 |

## Summary of Key Findings and Recommendations

This project was conducted to identify specific community health needs of the designated county. Key elements specifically addressed include community socio-demographic profile and vital statistics, personal community health status/profile, including major health indicators, behavioral risk factors and health practices, available resources, services, and utilization patterns. The overall desired outcome is to identify indices and key health indicators for the community in order to foster dialogue about actions that can be taken to improve the community's health.

## Demographic/Socioeconomic

- Bonifay area houses majority of Holmes county residents and functions as an access port for most of the county health and socioeconomic resources for residents.
- Average age of the county is middle age and may explain the high prevalence of chronic diseases such as hypertension and diabetes.
- Average annual income is less than $\$ 30,000$ with unemployment rates at $29 \%$.
- Income/poverty status and educational status for high school completion are low
- Among the county residents who reported unemployed, $28.6 \%$ and $26.2 \%$ identified being ill/disabled and retired respectively as the reason for being unemployed. A significantly large number of residents (91\%) perceived that there are not enough jobs within the county.
- Residents perceived that job opportunities in the county were inadequate, and they desire good jobs and a healthy economy. Low level of income and education may be attributed to reported difficulty with job availability for county residents especially among the ill and disabled. These findings are consistent with existing reports and evidence which correlate poor socio-economic status and low education with poor health status and its adverse consequences (Crabtree, 2010).
- Housing situation is mostly satisfactory. However, a large proportion of houses (31\%) are mobile units and old. Individuals who stated they are not satisfied with their housing identified house being too small or crowed and too run down as the main reasons.
- Family unity and spiritual/faith systems were identified as very important among county residents, and obviously exert strong and vital influences on the health performance and beliefs of county residents.

## Health Indicators and Risk Factors

- High level of perceived poor personal and community health status.
- A significant number of county residents encounter interference with their health from poor physical health, mental health, or pain issues. Health interference has been associated with poor perception of health, and functional limitations (physical, social, emotional) in adult populations (Thomas et al., 2004).
- High prevalence of high risk chronic diseases such as hypertension ( $>51 \%$ ), overweight/obesity (> 66\%), diabetes, and arthritis significant.
- Prevalence of risky and unsafe behaviors/practices such as unsafe sex and alcohol, tobacco and substance use, and inactivity is noted. Co-morbidity of risk factors with reported chronic diseases increases risk and mortality rates. (DHHS-CHSI, 2009)
- Preventive screening and immunization in all recommended categories are not optimal. Very poor rates of immunizations (less than 30\% of surveyed residents), poor diet/physical activity, and poor preventive health screening rates indicate a huge shortfall in key health indicators.
- Physical activity status of residents is not optimal as over 30\% remain inactive or do not participate in exercise.
- Received high rating as a safe community. However, there are concerns about manufacture and use of illegal drug and substance, alcohol, unsafe safe, child abuse and unsafe roads.
- The existence of older and substandard housing (mobile homes), could result in environmental health concerns. Mobile homes are meant to be temporary housing.

## Access to Health Care

- More than $20 \%$ were unable to, or did not, access healthcare in the past year and close to $20 \%$ do not have health insurance.
- High number of residents access healthcare services outside of the county mostly due to provider of choice location and/or no service or provider in county. The type of healthcare services mostly accessed and needed by county residents are not adequately available within the county to meet community health needs and to alleviate identified health risks for the county.
- A large number benefit from, and are able to access, social services such as Medicaid and other healthcare assistance within the county.
- Visits to healthcare provider (physician, dental, eye) is less than optimal. These visits are inhibited by cost or lack of insurance.
- Top 3 healthcare providers needed are women's health, cancer care, and family practice.
- Top 3 healthcare services needed are walk-in clinics, wellness centers, and dental service.
- One of the main barriers to healthcare access continues to be lack of healthcare insurance.

## Recommendations

Recommendations are proposed as follows:

- Co-existence of high rates of hypertension, overweight/obesity, and diabetes among county residents is deemed a situation for urgent community intervention.
- To intervene toward large number of residents who are not meeting recommended standards for healthcare access, preventive health or healthy lifestyles, prompt community activation and engagement to build relationships toward effective community participatory programs is recommended.
- Launching new community health education campaigns will be needed to target healthy weight, healthy lifestyles, and improve community safety.
- Limitation on health due to physical, mental, and pain interferences will require standards for deliberate and ongoing assessment to prevent severe adverse impact on physical activity and overall health.
- Expand insurance programs to cover more county residents and increase access to care. High rate of residents who do not access healthcare due to "no reason" or lack of knowledge is perplexing and would need to be addressed through more focused comprehensive community outreach and education.
- Expand programs for mental healthcare via more in-county programs and providers.
- Additional health facilities will be needed to provide more access for primary and wellness care, and diagnostic services.
- Increase number of healthcare practitioners to improve access to primary and women's healthcare, dental, mental, and eye health care. This will significantly reduce present disparities.
- Quality of the environment should be enhanced to promote healthy active lifestyles. Develop infrastructure and programs using a multi-purpose center model to promote quality age related activities, physical and social fitness, family and community engagement, and recreation. Environmental designs should be constructed to accommodate active lifestyles and outdoor activities will be beneficial to the county residents who obviously enjoy outside living.
- It will be necessary to utilize family and faith-based organizations to direct and foster educational campaigns and efforts for better population reach.
- It will be necessary to decentralize services to bring access points closer to more rural residents.
